ACTA CUARTO FORO VIRTUAL IBCSEP

A los 7 días de Noviembre del 2006, siendo las 10h30 a.m. hora de Ecuador se dió inicio al **IV FORO VIRTUAL del IBCSEP**.

Para esto se conectaron los representantes de todos los países miembros Colombia, Perú, Chile y Ecuador con el objetivo de considerar aspectos técnicos de la revisión final del **Manual de Especificaciones Cartográficas para la Carta Batimétrica Regional** que previamente el estado miembro de Chile envió a todos los estados países para su revisión.

El **Anexo 1** contiene el desarrollo del foro a detalle; una vez deliberado sobre algunos temas técnicos puntuales sobre el **Manual de Especificaciones Cartográficas para la Carta Batimétrica Regional** se llego a la conclusión de que el Servicio Hidrográfico de Chile "Shoa" realizaría las modificaciones consideradas de tal manera que quedaría listo el manual de especificaciones de cartas batimétricas para la impresión final que será realizada por cortesía de SHOA como lo indica en el Acta del Taller de Cartas IBCSEP en el literal 3.b.iv donde se adjunto el cuadro de las actividades y responsabilidades de cada país miembro para la obtención del manual.

El foro concluyó a las 12h49 con una duración de 2h19 minutos.

Mario PROAÑO Silva
Capitán de Fragata - EM
Director del IBCSEP

SEGUN LA COMUNICACION ENVIADA POR ECUADOR SOBRE LA LATITUD MEDIA DEL 27 GRADOS SE ENCUENTRA DETALLADA EN LA EN LA SECCION 2002 ESCALA (LA INQUIETUD ERA DE SI SE DEBE AMPLIAR EL CONCEPTO INDICANDO QUE ES UNA LATITUD A SER USADA EN TODAS LAS CARTAS DE LA REGION)

Para nosotros es claro que la latitud media es 27° Sur para permitir que las uniones de las hojas coincidan.

La sugerencia del parrafo es mas bien de redaccion

en rigor el erroneo concepto de lat. media significa en que latitud la escala es valida, es decir el factor de escala k=1

repito que el concepto de "latitud media" no es correcto porque no significa la "latitud del medio", significa donde es valida la escala

EL TEMA L,ATITUD MEDIA FUE TRATADO MUY A FONDO EN EL TALLER DE CARTAS BATIMETRICAS EN EL SHOA Y LO QUE ECUADOR SE REFERIA ES EN MEJORAR LA REDACCION DEL PARRAFO DE TAL MANERA QUE QUEDE DETALLADO SIN CONFUNCIONES O INTERPRETACIONES POSTERIORES.

efectivamente es el mas utilizado, pero no significa que sea correcto, si vemos cartas americanas o europeas ellos utilizan el concepto de donde el factor de escala es 1

FERNANDO: ANALIZANDO LA SITUACION DE LOS CONSEPTOS CARTOGRAFICOS DE LATITUD MEDIA Y REVISANDO DETENIDAMENTE EL MANUAL DE ESPECIFICACIONES REALMENTE LA LATITUD MEDIA ES DE LA REGION (PARA TODA LA SERIE DE CARTAS), ESCALA VÀLIDA EN ESA LATITUDA. RAZON POR LA CUAL CONSIDERARIAMOS ACEPTABLE EL PARRAFO 202 CON LA ACLARACION DE VALIDA EN LA LATITUD 27 GRADOS SUR

Nuestra region anteriormente acordo utilizar un marco las cartas de esa region no tienen marco , tenemos que cambiar eso?? creo que no deberiamos hacerlo...

esa seria una dificultad para optar como modelo una carta de otra region ...

tamanno del manual o del Acta??

sugerimos se use la del Acta final.

Otro tema, en la Seccion 400 - Batimetria, sugiero complementar el texto así;

401 La compilación batimétrica se realizará a escala 1:250.000, en latitud media 27° Sur

en el acta dice

dimensiones netas: 794.03 x 985.80

maximo de impresion: 910 x 1200

el manual dice:

dim. internas: 795 x 986

max. impresion: 910 x 1200

¿cual se adopta? creo que da lo mismo

creo que debemos recordar que al hablar de "compilacion batimetrica a tal escala....." la idea es señalar la "resolucion de la data", cada sonda va a tener las mismas coordenadas independiente de la lat. media que se use

las compilaciones pueden tener cualquier lat. media..... y al llevar esta info a la hoja final, recien ahi adoptaran la "deformacion" correspondiente y natural

Corrijanme

mi Manual en el art 204 dice

no debera excederse 740 x 900 mm..

Con el antiguo procedimiento solo figuran los escudos de los países que confeccionan cartas, la participación de todos los escudos será conveniente ya que aparecerá Colombia.
