

Date: 10 September, 1964.

Observer: *Parmenter*

Times: 20:13 u.t. ———— 20:19 u.t. ———— 20:21 u.t. ———— 20:50 u.t.
 "plotter"

Sky Condition: clear—but "hazy-Blue"

Solar Limb: *only fair.*

Apparatus Used: 7" Image "Plotter" ——— 10" Spectroheliograph — graph — vector — (Ha)

Remarks:

Condition of sky—plus road-repair trucks working in vicinity of lab. does not make for good observation of Spicules. However, was able to ascertain North Polar Region had "general-aspects" of 9 September. South Polar Region not "worked".
