

H.A.O. Copy

Day Solar Report:

NORTHWESTERN OBSERVATORY

Spokane, Washington

Date: 23 January, 1967.

Observer: Parmenter

Times: 19:40ut. — 19:55ut. — "Plotter" only.

Sky Condition: mostly clear

Solar Limb: fair only (solar heating of cold ground producing much turbidity)

Apparatus Used: 7" Image "Plotter" — no H α observations

Remarks:

a merging of northern Hemisphere spot-groups providing
a N.E.C. (D-4) "chain". Appearance of SE³(H-1) group — might be
quite active in H α
