

Improved Solar Observing Optical Network

NOTE: ISOON is being transitioned to Kirtland AFB, and images will be made available after the telescope is working again.

The Improved Solar Observing Optical Network (ISOON) project is a collaboration between the [Air Force Research Laboratory Space Vehicles Directorate](http://www.kirtland.af.mil/afri_vs/) and the National Solar Observatory. ISOON was known from 2006-2010 as OSPAN, the Optical Solar Patrol Network.
